Build It Live

A submission-driven engine that turns real platform questions into reusable OutSystems proof and assets.

Idea sources

What fuels the content engine

- Internal/Community asks
- Customer use cases
- Partner ideas
- Sales and field questions
- New Product Features
- Fun Relevant Ideas

Every idea becomes a usable asset

Requests →

Submission process

We collect use cases, integrations, AI processes, industry information and aggregate those into episodes.

Submission Engine

Creating the assets from the ideas.

1. **Submit**
   Capture idea, use case, industry, integrations, AI layers.
2. **Review**
   Triage, organize requests, assess outcomes.
3. **Group**
   Cluster similar asks into episode themes.
4. **Plan**
   Create episode script, align resources, plan advertising and release dates.
5. **Create**
   Film episode, create assets, shorts, clips, marketing posts.
6. **Release**
   Post to socials/repos.

→ Assets

Reusable growth loop

Each idea and episode feeds the engine, fuels AEO and marketing interest, and grows reusable proof, clips, repos, and enablement assets.

Output from Content

Where each build compounds

- **Content**
  YouTube episodes, Shorts, TikTok, LinkedIn posts
- **Developer resources**
  GitHub repos, OML files, READMEs, docs
- **Forge and community**
  Reusable apps, components, starters, examples
- **Internal enablement**
  Demo scripts, training clips, field-ready examples
- **Launch support**
  Feature companion builds and controlled previews
- **Insights**
  Demand signals, topic clusters, high-interest use cases
